

Automated and Quantitative Analysis of Biologics

with the PA 800 Plus Pharmaceutical System

Consistent, Confident and Compliant Data

Good analytical technologies provide comprehensive characterization and facilitate regulatory compliance.

Established techniques capable of generating results with a high level of accuracy, sensitivity, reproducibility, and flexibility are therefore, paramount to biopharmaceutical analyses within your lab.

Research analysts handling protein therapeutics need:

- Automated qualitative and quantitative analyses
- Proven functionality enabling maximum operational efficiency
- Flexible method development as well as simple routine operation across a range of molecules
- Robust, industry validated applications that are globally transferrable

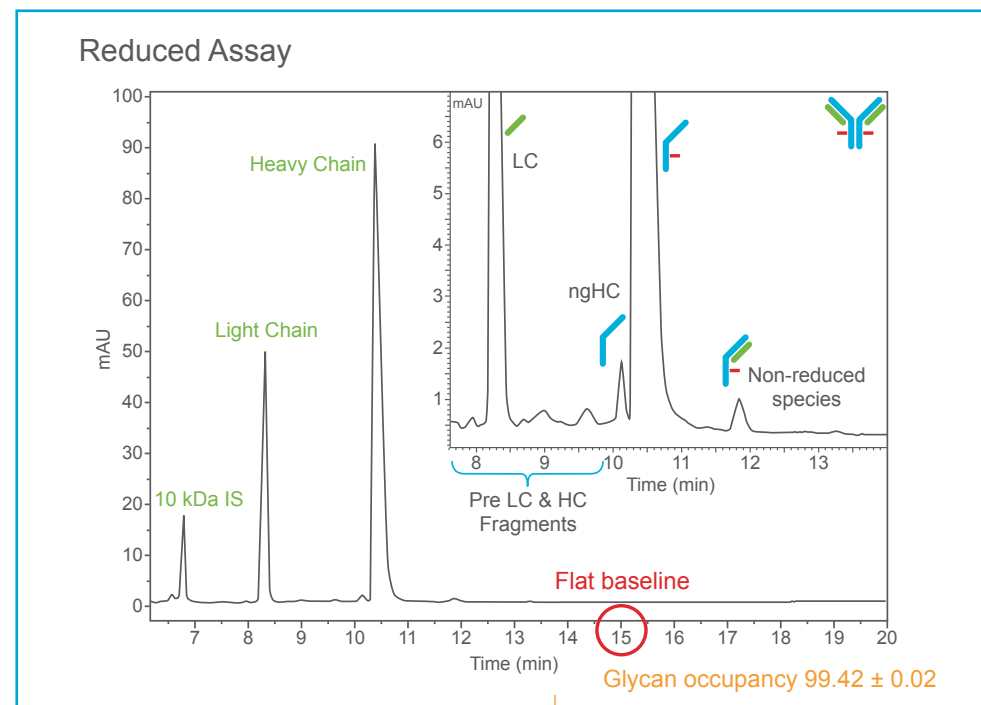

The PA 800 Plus Pharmaceutical Analysis System is a robust analytical platform that provides consistent, confident & compliant data, with easy-to-use software for the development and QC of biologics.

Exceed Sensitivity and Resolution Requirements

Protein Purity Characterization Below 0.1%

Association of low-level impurities with therapeutic proteins can mean the difference between the success and failure of a biotherapeutic.

Have confidence in your results with SCIEX CE-SDS, the gold standard adopted by biopharma for this application.

Capillary-based SDS method for separation of reduced NIST mAb, in less than 15 minutes.

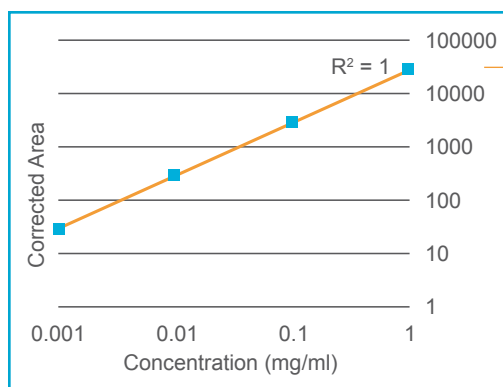

Contrary to slab gel, CE-SDS can resolve non-glycosylated heavy chain from glycosylated heavy chain, and can quantitate it too, as per regulatory requirements.

Complete Your Protein Purity Characterization in <18 Minutes

Time is of the essence. Workloads are high. Achieve more and make every minute count without impacting the quality of your data, with fast, accurate and reproducible separations.

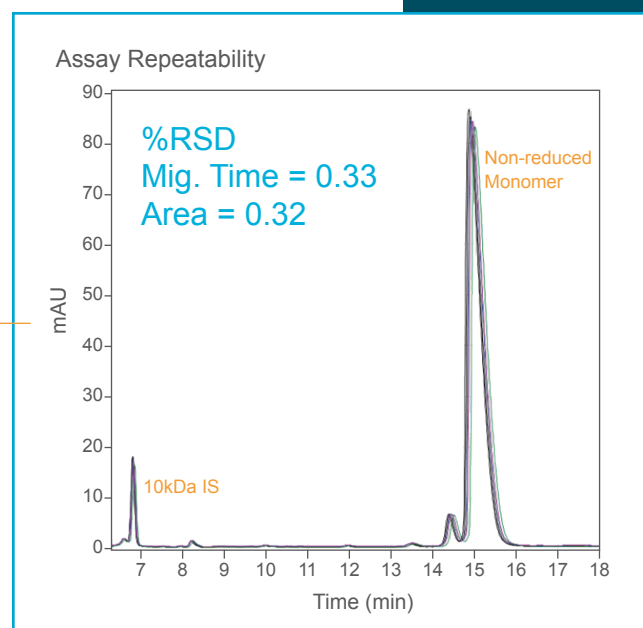

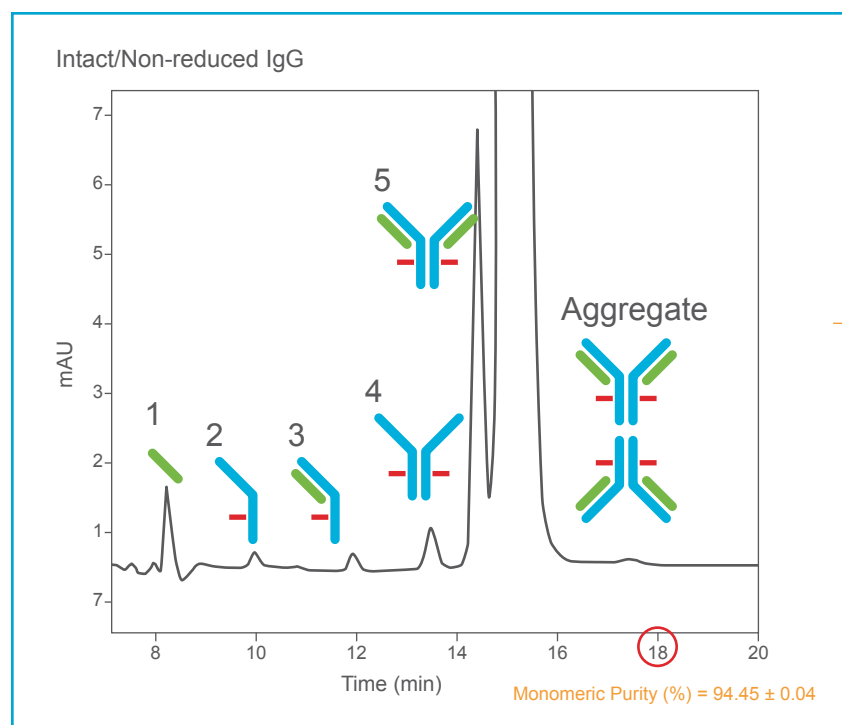

Protein Purity Characterization in <12-18 min.

Gain excellent assay reproducibility for both reduced and non-reduced IgG analyses on the PA 800 Plus.

Achieve maximum sensitivity with the PA 800 Plus modular UV and Laser Induced Fluorescence (LIF) detection – providing at least three orders of magnitude of impurity detection – 0.1% and 0.01% respectively.

Rapidly Assess Monomeric Purity

6 overlaid traces demonstrate the assay repeatability as the migration time and peak area RSDs are less than 0.5%

MAb Charge Heterogeneity Analysis by CZE, Part 1: Results of an Intercompany Robustness Study

Dr. Bernd Moritz, Hoffman-La Roche,
Pharmaceutical Division, Basel, Switzerland

MAb Charge Heterogeneity Analysis by CZE, Part 2: A Case Study from Merck Sharp & Dohme

Dr. Joop Waterval and Tijmen Verwij,
Merck Sharp & Dohme, Netherlands

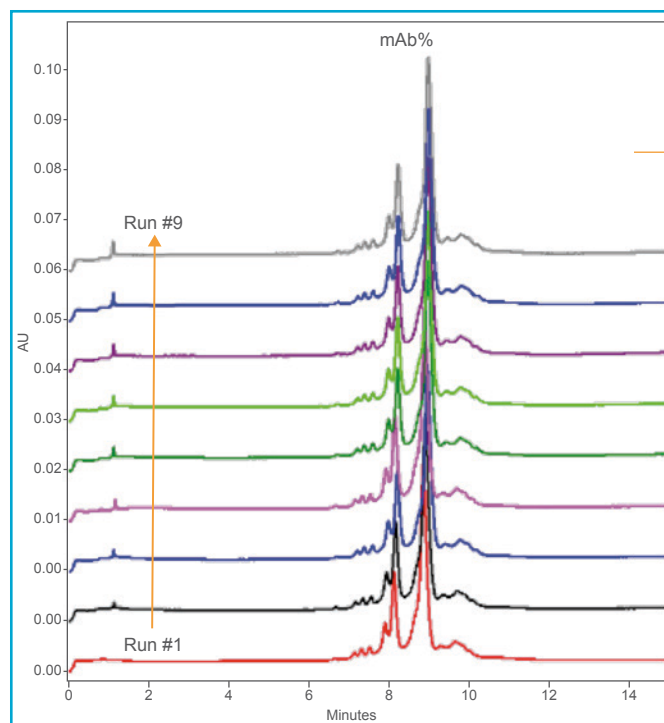

MAb Charge Heterogeneity Analysis by CZE, Part 3: A Test Method Fit for QC Testing

Dr. Marc Hassel, Novartis Pharma AG, Basel, Switzerland

High Throughput Charge Heterogeneity Made Easy

Rapid Charge Variant Analysis Made Easy

When used on the PA 800 Plus, Capillary Zone Electrophoresis (CZE) offers faster separation results than other LC and CE methods. Additionally, you'll find CZE offers many other advantages for your lab.

CZE separations are performed with high reproducibility and are ideal for multi-user/multi-instrument environments.

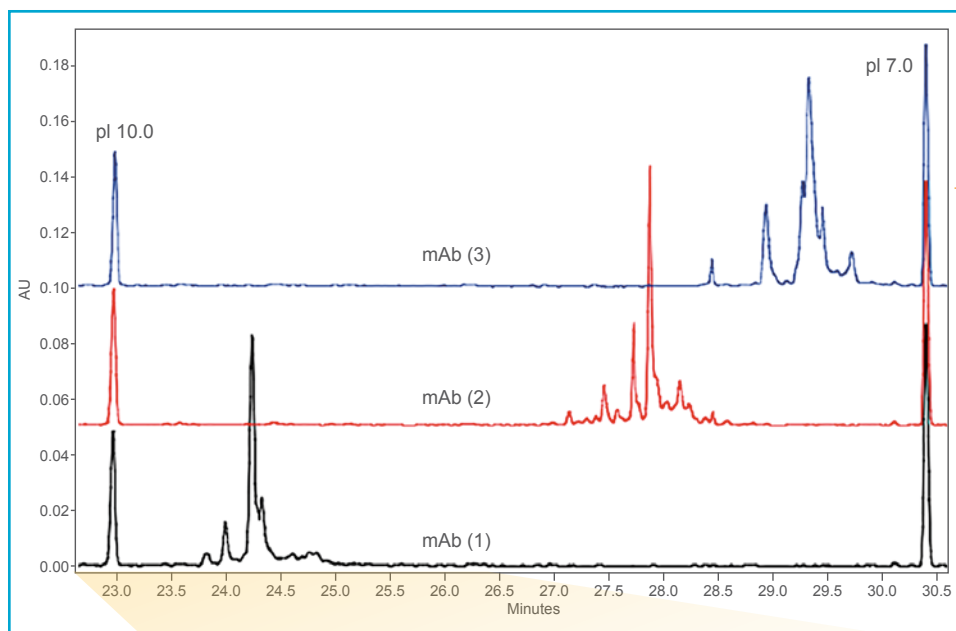

Parameter	SCIEX cIEF	CZE	non-SCIEX cIEF	CEX (pH gradient)
Resolution	Very good	Good to very good	Moderate to good	Good to very good
Analysis time	20-25 min	18-21 min (incl. rinsing)	20-25 min (incl. rinsing)	90 min
Applicability to mAbs without modification of the method	75%	100%	65%	~80%
Buffer consumption	Very low	Very low	Very low	720 ml / 8 runs
Injection concentration	0.3 - 0.4 mg/ml	0.009 - 3.6 mg/ml	0.3 - 0.4 mg/ml	0.006 - 3.6 mg/ml
	SCIEX data	Novartis data, see webinar		

- Screen charge variants in 10 minutes
- Save time with fast, simple sample preparation
- Same method applies to a wide range of pI

Highest Resolution Charge Heterogeneity Capillary Isoelectric Focusing (cIEF)

Confidently Assess Protein Stability

The SCIEX cIEF workflow on the PA 800 Plus System has proven robust and portable. Universal or platform methods can also be created – significantly decreasing method development efforts and simplifying workflows with a single method for molecules across a wide pI range.

cIEF workflow can be established as a standard platform assay across a wide pI range, simplifying workflows.

Ultra high resolution cIEF is capable of achieving separation between isoforms as closely related as 0.03 pI units.

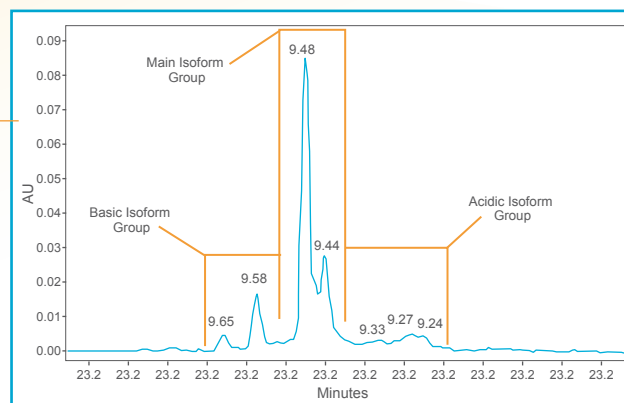

Figure 7: mAb (1) Peak Profile. A close up view of the mAb #1 cIEF separation.

Rapid, Precise Glycan Analysis

SCIEX offers high throughput semi-quantitative glycan screening for clone selection and process control as well as fast glycan analysis for biologics characterization from standard mAbs to complex proteins – all using the same award-winning chemistry.

In addition, SCIEX LC-MS and CESI-MS solutions can accurately determine intact and subunit level glycoprotein profiles for comparability reasons, as well as obtain site specific glycan information at the peptide level.

Simplify your Workflow One Chemistry from Clone Selection Through QC

Resolve Critical Microheterogeneity Information with Fast Glycan Technology

Glycosylation is critical for the efficacy, clearance, and immunogenicity of biologics. Incorrect glycan species associated with a biologic, like a monoclonal antibody (mAb), can lead to an increase and/or decrease in antibody or complement dependent cellular cytotoxicity. SCIEX Fast Glycan Technology gives you the power to rapidly resolve microheterogeneity and helps you profile glycans that could lead to changes in function, efficacy and clearance of a biologic.

Sciex Award-Winning Fast Glycan Technology Takes You from Intact Proteins to Glycans with Sample Prep

- as quick as about an hour for a few samples
- or in <2 hours for 96 samples, using automation

With software that provides Immediate Glycan Identification.

Make Confident Decisions on Clone Selection and Cell Culture Optimization in Real-time

Easily Screen Large Sample Cohorts, with the C100HT Biologics Analyzer

Just mouse over any well and see why the sample passed (green) compared to your acceptance criteria, or failed (red). Parameters can be easily changed if desired.

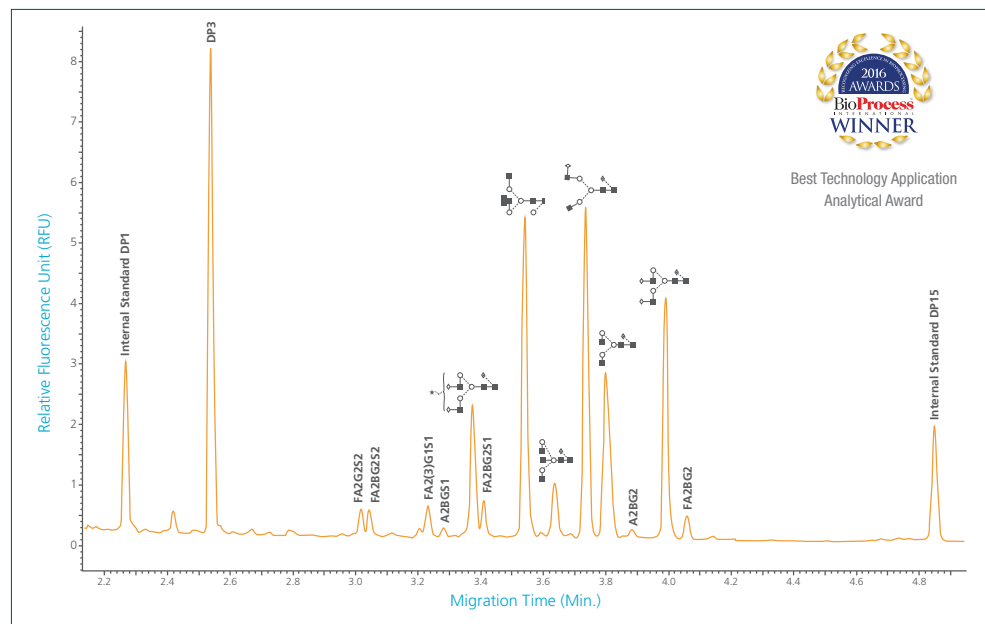

Characterize Glycans in Record Time

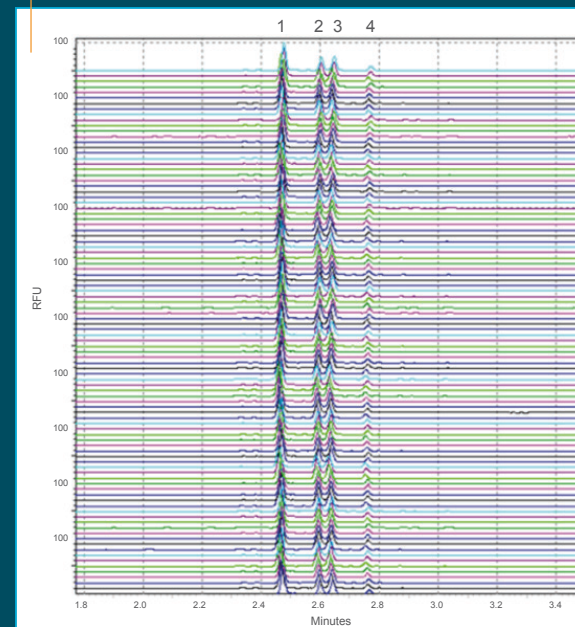

Glycoprotein to Identified Glycans within 90 minutes

When paired with the PA 800 Plus, SCIEX Fast Glycan Labeling and Analysis technology delivers rapid glycan heterogeneity identification, capable of profiling your glycans in record time.

Combining simplified sample preparation, rapid separations and automated glycan identification, you can make confident decisions quickly by running glycans up to five-times faster than HILIC – including sialylated N-glycans.

Get repeatable results with exclusive recirculating liquid coolant to control separation temperature.

Raw data illustrating rapid and highly reproducible CE-LIF analysis of APTS labeled IgG glycans prepared in a 96-well plate format using automated liquid handling.

Optimize your workflows through the use of automated sample preparation, resulting in high resolution separation data with excellent reproducibility across large sample sets.

Obtaining High Resolution Glycan Analysis Has Traditionally Required Patience

	HILIC UHPLC	Conventional CE	SCIEX Fast Glycan CE
Sample Prep	30-min to 24-hours	4-hours	1-hour
Separation Time	17- to 45-min	15- to 20-min	5-min
Immediate ID	—	—	✓

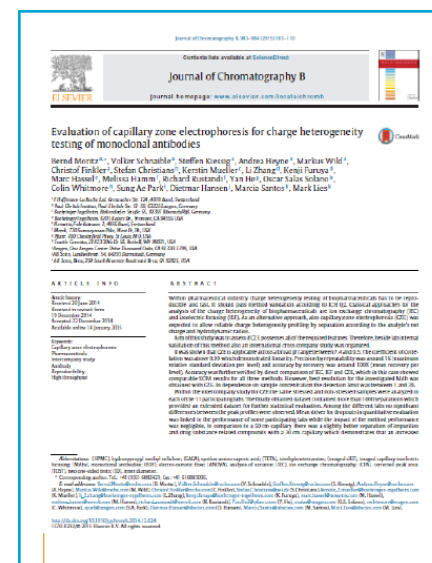

"PA 800 Plus has been validated for ..."

It's Time to Reduce Complexity in Biologics Characterization

Glycan Analysis is part of the SCIEX 360° solution for Biologics Characterization. You can advance your characterization workflows with our full-circle product portfolio, including application-focused systems, software and services designed specifically for biologics analyses. SCIEX innovation can help you speed routine tasks as well as simplify your most complex characterization challenges. Now you can achieve insights faster and with greater confidence than you ever thought possible. Find out more at sciex.com/biologics-characterization.
