

BioPhase software 1.6

Flexibility when you need it. Controls when they matter.

As drug development programs evolve, you need workflows that can adapt without slowing progress.

BioPhase software 1.6 helps teams align controls with project requirements while maintaining continuity across development activities, adapting as programs mature without introducing unnecessary disruption.

Designed to support workflows under GxP

Incorporate configurable access controls, audit trails, electronic signatures, and project management capabilities to support alignment with regulated environments.

Configure controls when they add value

Align workflow controls with project needs, introducing additional oversight as requirements evolve without adding unnecessary complexity to routine development.

Maintain workflow continuity

Use a common software platform across development activities while accommodating evolving documentation, review, and traceability requirements.

Be ready for reviews and audits

Support reviews and audit preparation activities with strengthened data traceability including: electronic signatures, authority checks and digital, searchable projects.

Workstation mode or enterprise mode, your choice.

Different laboratories require different ways of working. BioPhase software 1.6 allows organizations to choose the operating model that best aligns with their workflow requirements.

Workstation mode

Maintain the streamlined BioPhase 8800 system workflow you know for method development, sequence creation, and data analysis.

Enterprise mode

Add configurable access controls, audit capabilities, user permissions, and electronic signature workflows to support evolving documentation, traceability, and review requirements.

Key capabilities:

- + Controlled access and user management
- + Workflow traceability to support audit preparation
- + Electronic signatures and approvals
- + Data integrity and record management

Flexibility when you need it. Controls when they matter.

BioPhase software 1.6 helps laboratories maintain streamlined development workflows while adding configurable access controls, audit trails, electronic signatures, and project management capabilities as requirements evolve.
